Pierre Ansay

36 conceptual tools from GILLES DELEUZE

To better understand the world and act in it

The philosopher Gilles Deleuze (1925-1995) has written, with his comrade Félix Guattari, a major philosophical work for our political and practical future within the so-called post-modern world. More Marxist than Marx and more Freudian than Freud, he extends and vigorously criticizes the texts of his two founding fathers. Close to anarchism, in constant discussion with Spinoza, Nietzsche et other great thinkers, Deleuze keeps plugging connections between philosophy, art and politics, creating new political views and very moving existential evaluations.

Pierre Ansay presents 36 concept-tools drawn from his work with a strong education ambition. Receiving this iconoclastic work introduced and extended by the author should never leave our progressive certainties unscathed. Pierre Ansay is accustomed to educational books on philosophical writers from Spinoza to ... Gaston Lagaffe. This book's original aspect undoubtedly lies in its presentation of 36 concepts from Deleuze like so many very practical tools to better understand our world and to better govern ourselves in it.
